

SCBA-HAZMAT AND CONFINED SPACE MAZE SYSTEMS

The SCBA Maze System is designed for many various types of simulations. The structure includes our one of a kind reconfigurable maze system with tunnels, ramps and obstacles. The removable and reconfigurable system can be changed in a matter of minutes making it virtually impossible to memorize. In addition the simulator has a second level with mini panels, 24" manholes with sewer pipe configuration, shoring prop, roof access ladder and attachable roof top tanker or culvert prop.

The maze system allows you to adjust the degree of difficulty in the configurations from basic to what's been called by instructors and firefighters to be "The most versatile and stressfull maze system they have ever experienced".
